

Turnkey waste management solutions

Manufacturers often find themselves paying for costly disposal using standard waste disposal technologies such as solidification, land application, composting, and waste water treatment. Our program is designed to offer a zero cost solution for waste streams that contain recoverable fats, oils, and greases.

Industries Served

1. Food manufacturers
2. Oleo chemical
3. Consumer product
4. Food cooking facilities
5. Restaurant industry
6. Rendering plants

Danox is uniquely engaged in the business of transforming fatty acids, natural oils, and other natural by-product streams from manufacturing processes into all-natural, sustainable materials. These non-petroleum feedstocks are used to develop and manufacture eco-friendly products such as industrial and consumer wax, animal feed, renewable liquid fuels and freeze conditioning agents. These multiple use applications provide our customers:

- Best value
- Recycling
- Result oriented, sustainable program
- Secure and compliant disposition solutions

Danox Environmental Services, Inc. will proactively review any generator sample that may contain natural oils, fatty acids, or other natural products. We perform analyticals on each sample, at no cost to you, to ensure that we can place the stream in the appropriate recovery class. These analyticals drive the highest value possible for recovery.

Our staff of professionals, which include Certified Hazardous Material Managers (CHMMs), are ready to deliver a full service review of your by-product streams. You can depend on our expertise to provide the best recycling option available.

SOURCES FOR BY-PRODUCT MATERIALS

Off-Specification Product Batches

Out-of-Date Products, Packaged/Bulk

Distressed Material

DAF Water Treatment Systems (DAF Float)
