

Turnkey waste management solutions

Does your company have small containers of expired or off-spec chemicals, solvents or industrial supplies that need disposal? Even though you may only have limited quantities of these materials, EPA regulations still forbid these wastes from being thrown into dumpsters.

Danox Environmental Services understands that safe handling and regulatory compliance are priorities for our customers when managing lab chemical related projects. Our professionals have over 75 combined years of experience providing innovative solutions for proper lab waste management. These options are site specific and combine generator site requirements with EPA, DOT and receiving facility guidelines.

Services:

- Inventory management
- Product identification, waste characterization and facility approval
- DOT approved packaging, segregation and labeling
- Preparation of required shipping paperwork (labels, manifests, LDRS)
- Transport your material to our disposal facility
- EPA compliant depacking and disposal solutions

Whether you manage a laboratory, factory, medical facility, or any other operation that produces waste requiring lab packing, let Danox Environmental work for you!
