

Comprehensive Waste Management Solutions

EPA's Universal Waste Regulations (40 CFR Part 273) outline proper collection and management of many commonly generated wastes that contain hazardous components. Additionally, many states have or are looking hard at adding additional electronic categories under the Universal waste regulations that pose potential risk to human health and environmental contamination.

E-waste:

Danox has the ability to recycle your E-Waste whether or not your State regulates. We typically see large volumes of:

- Television and Computer Monitors
- Computer Keyboards
- Telephones
- Cathode Ray Tube Containing Devices (CRT Devices)

Danox management method:

Danox Environmental develops and facilitates EPA compliant management plans for all Universal Waste regulated streams. Our experts design site-specific and customizable procedures to handle your company's unique waste output. We assist with:

- EPA classification and profiling
- Supply of containment and shipping packaging (including shipping paperwork)
- Proper handling of waste during transportation and processing
- Reporting data once processed
- Certificate of Recycle
- Universal Waste Mail-in Program (if applicable)

Every state has the ability to adopt the Universal Waste Federal regulations, or to take a more stringent approach. Furthermore, the quantity and frequency of your waste accumulation determines whether you are subjected to the requirements of a small quantity or large quantity handler of universal waste (SQHUW or LQHUW). To learn more about your state and handler-specific requirements and for a free quote on how we can manage your Universal Waste, contact a Danox consultant today.

UNIVERSAL WASTE:

Batteries

Waste lamps/Bulbs

Mercury-containing Equipment

Pesticides

Ballast and Capacitors

E-Waste
